From the dashboard, I noticed a darker country and under the map, I found a note says the country that has a darker shading marker has a higher number of deaths due to malaria for 14 years this means the most affected country in Africa from malaria is Kenya. I clicked on Kenya on the map, this showed the average death rate in Kenya every year is 27,896 death.

I clicked on Kenya and a histogram appeared ,the histogram showed that in 2003 Kenya record over 50,000 death in one year, and this is the highest number of death due to malaria in Africa NOT only in Kenya.

As shown in the Kenya histogram, in 2004 the death rate is <u>reduced to half</u> compared to 2003. And as I mentioned before in 2003 the annual death rates were over 50,000 deaths, but in 2004 the annual death rates reached 25,000 deaths which are the half.

In conclusion Kenya shows a noticeable decline in the death rates from 2011 to 2014. The annual death rates reached less than 1000 death.
